**RESPONSE TO ELECTION OF SPECIES REQUIREMENT**

Sir:

In response to the Election of Species Requirement of June 8, 2006, for which a response is due on or before July 8, 2006 (without any extensions of time), Applicants hereby elect, with traverse, species (d), upon which claims 1, 2, 5, 9, 19, and 21 are readable.

In the Election of Species Requirement, the Examiner states that the species have a different effect. However, all of the identified species result in an increase in the shear rate or shear stress of a non-Newtonian fluid and therefore should be examined together. At the least, species d-1 should be examined together because all can be used with a shear-thinning fluid to decrease the viscosity of the fluid (see e.g., paragraph 15, 20 and 24).

Further, claims 1 and 19 are generic.
